

CASE STUDY: ACT-L3™ Over a Single T1

Solution Summary

Customer: King 5, Belo Broadcasting
Location: Seattle, WA USA
Description: King 5, part of the Belo Corporation, one of the nation's largest media companies, needed a way to bring a live news feed from an airport tower cam into their studio at full D1 resolution over a single T1 network connection.

Challenge

King 5 had an existing microwave link that they wanted to use for other programming, so they needed an alternate link for their airport tower cam. They needed a full D1 resolution feed and only had a single 1.5Mbps T1 line. Station operations were skeptical that they could get a high enough quality signal over that line but the ACT-L3 Video Transport delivered.

Solution

Hardware: Streambox SBT3-5000 Video Transport System
Options: SDI output, genlock.
