

# Mobile Media Player

Mobile Media Player is a high performance, low latency application for iPad and iPhone devices. The application provides ten programmable channels to automatically “pull” live video streams from Streambox Cloud Services and Enterprise Server or receive an incoming stream directly from a Streambox encoder.

## Superior Quality Media from Anyplace to Anywhere

- Low cost remote viewing wherever there is Internet
- 2K and HD video playback
- 8, 10-bit video, and HDR support with optimized ACT-L3/L5 codec
- Up to 6 channels of uncompressed audio

## Security -- Protecting Intellectual Property

- End-to-end AES 128-bit video encryption
- No increase in stream latency

## Multiple Channels

- Setup and configure up to 10 video channels
- Automatically pull or receive a unique video stream from Streambox Cloud Services, Enterprise Server or from a point-to-point connection with a Streambox encoder

## Easy to Connect and Use

- Use on iPad and iPhone devices running iOS operating system, version 10 or higher
- Set once, then the application automatically finds the designated stream
- Works behind NAT/Firewall without static IP (requires Streambox Cloud or Enterprise Server)
- Stream with multi-path bonded LDMP 2.0 and UDP protocols on mobile or WiFi networks
